加密貨幣比特幣(Bitcoin)有很多好處。它幾乎不可能偽造而且沒有中央銀行，因此不受政府影響。然而，它也備受爭議，多半是因為製造比特幣對環境的負面影響。比特幣的製造方式跟一般貨幣不同。要開採一個比特幣，電腦就必須解決一個複雜的數學問題。比特幣最早在二〇〇九年製造出來時，問題容易解決多了，而且用一台普通的電腦就可以做到。但問題隨著每一個開採出來的比特幣而變得更加困難。

加密貨幣 cryptocurrency　　偽造 fake　　中央銀行 central bank

備受爭議的 controversial　　開採 mine

1151012 社會人士中翻英短文翻譯參考答案

The cryptocurrency Bitcoin has a lot of positives. It is nearly impossible to fake and has no central bank, so it is safe from government influence. However, it is also highly controversial, in large part because of the negative effect that producing it has on the environment. Bitcoins are not produced like regular currencies. To mine a bitcoin, a computer has to solve a complex math problem. When Bitcoin was first created in 2009, the problems were a lot easier to solve and could be done by an average computer. But the problems become harder with each bitcoin that is mined.
